# Information security

Information security means protecting information and information systems from unauthorized access, use, disclosure, disruption, modification, perusal, inspection, recording or destruction (definition from Wikipedia).

The components in information security

- Confidentiality: the guarantee that information is not disclosed to unauthorized individuals or systems.
- Integrity: the guarantee that data is according the reality in terms of correct, timely and complete.
- Availability: the guarantee that data can be accessed at the time and place as required by the data owner.

Security measures

That a chain is as strong as its weakest link, is highly applicable for information security. For instance: secured storage via encryption requires strong user authentication. In information security balancing the security measures is essential. Balancing focuses your investments and can even lead to savings!
